Dear Sir

Pardon the liberty I take in availing myself of the introduction to you which I was favoured with during the past summer at Edinburgh. In Canada here we are sufficiently far out of the world to be left behind in most matters of progress. I have access to your excellent paper on the Flint Implements in the Drift - just? in vol. XXXVIII. of the 'Archæologia'. But if I mistake not, you have made another valuable contribution to the same interesting subject.

I trust you will not consider it too great a presumption in me to ask the favour of specific

information as to the prevailing character of the flint-implements found in the Cave-deposits.

Do they generally, or even frequently correspond to those of the drift? are they as large; and of the same characteristic types?

I see from Lyell that the bent, stole implements figured by Mr McEnery are of the Abbeville type, or approach it. Here questions of this kind, which probably no one at home would think of asking at this late stage of the investigation, are as obscure as ever; and we have no available means of information at hand.

I shall esteem it a very great favour, if you will kindly inform me, or refer me to the authorities on these points. The descriptions in many cases rather suggest the idea of flint Knives, flint flakes, and such lance or arrow-heads and hatchets as occur in the Contents of the later barrows; but as the objects are generally accessible, and frequently produced when the communications are made to the Geological and other Societies, the points about which I enquire are assumed to be known to all.

With renewed apologies for the liberty I am thus taking I have the honor to be Dear Sir Your obed. Servt

J. Evans Esq. F.S.A. &c. &c.
